

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

LATELY PUBLISHED

Barber's First Course in General Science

By **FREDERIC D. BARBER**, Professor of Physics in the Illinois State Normal University ; **MERTON L. FULLER**, Lecturer on Meteorology in Bradley Polytechnic Institute ; **JOHN L. PRICER**, Professor of Biology in the Illinois State Normal University, and **HOWARD W. ADAMS**, Professor of Chemistry in the same. vii + 588 pages of text. 12mo. \$1.25.

This manual for the first year of the high school is based on the conviction that at this stage the work in science should emphasize the physical aspects and animal and plant life, with personal and community welfare the crucial point of attack.

The topics presented have chiefly to do with the school life and home life of the pupil. They are essentially projects to be solved. Being topics with which the pupil is already more or less familiar, they have real significance and meaning to him. In dealing with home and school environment the laws and principles of the physical sciences are of primary importance, moreover, physical laws and principles are fundamental to all science, therefore, they form the major portion of this course. Microorganisms, however, play so large a part in the daily life of all people that the principal facts concerning them are also presented. The main study of animal and plant life has been left to be developed as a course in general biology, or as special courses in botany and zoology.

The approach to each new topic is made from a historical point of view, thus developing a real interest in the subject. Topics not essentially important in the environment of any class, or in the environment of the community, may easily be omitted without seriously breaking the continuity of the course.

Many of the exercises are best conducted as class demonstrations while a sufficient number of them are well adapted to individual work. The apparatus is unusually inexpensive and is such as is to be found in any fairly well-equipped laboratory, or of a commercial type easily procured.

One of the strong points of the book is its scientific accuracy. Each of the authors has made definite and material contribution, so that the volume represents the carefully arranged work of specialists in physics, chemistry, meteorology, and biology. This fact will do much to place an elementary course in general science on the high plane which it deserves.

THE SCIENTIFIC MONTHLY

An illustrated magazine, devoted to the diffusion of science, publishing articles by leading authorities in all departments of pure and applied science, including the applications of science to education and society. Conducted on the editorial lines followed by *The Popular Science Monthly* since 1900.

Annual Subscription \$3.00; single copies 30 cents

SCIENCE

A weekly journal, established in 1883, devoted to the advancement of the natural and exact sciences, the official organ of the American Association for the Advancement of Science. For twenty years SCIENCE has been generally regarded as the professional journal of American men of science.

Annual Subscription \$5.00; single copies 15 cents

SCHOOL AND SOCIETY

A weekly journal, which began publication on January 2, 1915, covering the field of education in relation to the problems of American democracy. Its objects are the advancement of education as a science and the adjustment of our lower and higher schools to the needs of modern life. Each number ordinarily contains articles and addresses of some length, shorter contributions, discussion and correspondence, reviews and abstracts, reports and quotations, proceedings of societies and a department of educational notes and news.

Annual Subscription \$3.00; single copies 10 cents

THE AMERICAN NATURALIST

A monthly journal, established in 1867, devoted to the biological sciences with special reference to the factors of organic evolution.

Annual subscription \$4.00; single copies 40 cents

AMERICAN MEN OF SCIENCE

A biographical directory, containing the records of about 5,500 scientific men.

Price, \$5.00 net

SCIENCE AND EDUCATION

A series of volumes for the promotion of scientific research and educational progress.

Volume I. The Foundations of Science

By H. POINCARÉ. Containing the authorized English translation by George Bruce Halsted of "Science and Hypothesis," "The Value of Science," and "Science and Method."

Price, \$3.00 net

Volume II. Medical Research and Education

By RICHARD MILLS PEARCE, WILLIAM H. WELCH, C. S. MINOT and other authors.

Price, \$3.00 net

Volume III. University Control

By J. McKEEN CATTELL and other authors.

Price, \$3.00 net

Revisions of Important Text-Books

Thompson's Elementary Lessons in Electricity and Magnetism

By SILVANUS P. THOMPSON. Revised by the author

Cloth, crown octavo, xv + 706 pp., 377 illustrations. \$1.50.

After a wide use for twenty-one years, this book now comes from the press in a completely revised form, which incorporates the progress of the science during this period, and brings the treatment abreast of the most recent developments in theory and practice.

Not only have the various topics taken up in the older book been brought to date and expanded where necessary to meet the needs of teacher and student, but the newer phases of the subject have been covered in the same clear direct manner which made the earlier volume popular as a text.

Entirely new chapters are devoted to the Electron Theory, to Wireless Telegraphy, to the Transmission and Distribution of Power, and to Electric Traction. In fact, progress in the development of the industrial applications of electricity has been so great in the past decade as to necessitate the remodeling of the latter half of the book. Throughout the book modern progress in construction and industrial application is described and illustrated by many drawings.

The general appearance of the new edition is much more attractive and serviceable than that of the old edition. The type is much larger, the space between lines is greater, and the number of illustrations has been increased by over 25%. Not only has the size of the page been increased, but the number of pages has also been increased by about ten per cent. Although these changes have involved a very heavy increase in manufacturing expense, the retail price is only ten cents more than that of the old edition. The price has been kept unusually low in order to make it possible for instructors to require students in the first general college course on physics to purchase this book in addition to the textbook on general physics.

"I think the book, as revised, will be very satisfactory, and, as far as I can judge from a careful inspection, it will meet the requirements of the present day as well as the earlier editions ten or fifteen years ago met the requirements of that day. To a certain extent perhaps a book written at a later date cannot quite meet this requirement because of the growth of the subject treated, but I think the present volume does very well."—Professor C. R. Cross, Head of the Department of Physics in the Massachusetts Institute of Technology.

Huxley's Lessons in Elementary Physiology

By THOMAS H. HUXLEY, Revised by Joseph Barcroft,
King's College, Cambridge.

Cloth, 12mo, xxiv + 604 pp., 185 illustrations. \$1.60

A thorough and substantial revision of this historic masterpiece, in which new material and additional illustrations have been included and further text-book apparatus provided. The manner in which Professor Barcroft has made this revision is best described in his preface, from which we quote:

"In approaching the revision of 'Huxley's Physiology,' my feelings have been similar to those of an architect to whom is entrusted the restoration of a historic building designed by a master hand.

Written by Huxley, the book was revised, and in fact almost rewritten, by Foster. The former was as great a writer as any scientist of his time, the latter may almost be said to have created English Physiology.

To 'restore' the work of these men from the dilapidations made by two decades of scientific progress is the task now entrusted to me. The sense of responsibility with which I approach it is, if possible, heightened by the affection which I have for the memory of Foster, who was my master.

I have faithfully left untouched any portion of the fabric in which there was not an actual flaw; but where the structure needed repair, it seemed to me due not only to the readers of the book but to the memory of the author, that the repair should be thorough, substantial, and simple. Such have been the principles on which I have tried to carry out my work."

School and Society

Under the title "A School Journal at Last" the *Newarker*, published monthly by the Newark Free Public Library, says:

At last we have a weekly journal devoted to the subject of education which the average intelligent citizen can read with pleasure and profit. It is not devoted to primary methods. It does not tell how to teach arithmetic. It is not too philosophical, or too theoretical, or too dismally practical. It is simply a sensible weekly journal which covers the whole field of education in an agreeable, rational and illuminating manner.

It is called *School and Society*. It is edited by J. McKeen Cattell. It is published by the Science Press, Lancaster, Pa., and Garrison, N. Y. This same press publishes, and this same editor edits the weekly journal called *SCIENCE*. *School and Society*, in its field, is as good a journal as *SCIENCE*, in its field, which is saying much.

Principals, assistant principals, high-school teachers, and the teachers in the higher grades should read this journal every week, unless they can find a better source of information and enlightenment elsewhere.

The library at present takes one copy of this magazine. If teachers and others make requests for it, the library will take a number of copies and lend them, so desirable does it seem that a journal of this kind be widely read in our city.

A leading editorial article in the *New York Evening Post* begins:

With the opening of the new year an interesting addition was made to the already large list of American journals devoted to educational questions. *School and Society*, which forms the third periodical of somewhat kindred nature edited by Dr. J. McKeen Cattell—the other two being *SCIENCE* and *The Popular Science Monthly*—aims to combine the functions of a professional journal for those engaged in educational work and a medium of interesting information and discussion for "the wider public for whom education is of vital concern."

What strikes one, above all, in reading the early numbers of *School and Society* is the enormous range of the subjects which, within the past decade or two, have become live topics in educational discussion. Indeed, if it was the editor's purpose to produce this impression without a word of editorial flourish—for he adds nothing to the extremely brief announcement of purpose in the advertised prospectus—he has adopted an extraordinarily effective method of doing so in using as the initial article of the journal President Eliot's address at the inauguration of Dr. Finley as Commissioner of Education of the State of New York.

Heredity and Environment

in the

Development of Men

By EDWIN GRANT CONKLIN

Professor of Biology in Princeton University

"The lay reader cannot fail to be interested in the wonderful array of post-Darwinian achievements in biology which are here marshalled in such a clear way; and the biologist familiar with the detailed discoveries to which mere reference is made by way of evidence or illustration, will profit much by the survey of a whole field in well-balanced perspective. The general reader, who gets from current literature quite contradictory and often distorted views as to the undertakings and the possibilities of the eugenics movement, will here find a correct and sane inventory of both."—*Science*.

"The book is marked by sound judgment, firmness and clearness of treatment, and a vigorous buoyancy. It is to be strongly recommended to those who wish to understand the facts of human development in their relation to the larger problems of human life. The volume is well got up, effectively illustrated, and provided with a carefully selected bibliography and an unusually good glossary as well as a full index."

—*Nature*.

"We have great pleasure in commending the study of these instructive and suggestive lectures to all who are interested in the problems of heredity and environment as they affect the development of animals and man."—*The Lancet*.

"For those who desire real knowledge of the important subjects of heredity and environment, Professor Conklin's book is emphatically the one to read. In hardly another treatise can be found so clear, shapely and relatively simple an outline of the essential scientific facts, or so sound and inclusive a view of what the facts humanly signify."—*North American Review*.

This book has been adopted for use as a required text book or for collateral reading in the University of California, Agricultural College of Utah, Central Wesleyan University, Centre College, Colorado Agricultural College, Dakota Wesleyan University, Elmira College, Goucher College, Harvard University, Northwestern University, Ohio Wesleyan University, Princeton University, Syracuse University, University of Colorado, University of Illinois, University of Pittsburgh, University of Texas.

"Humanized Science"

is what a reviewer calls

An Introduction to Science

By BERTHA M. CLARK, Ph.D., Head of Science Department, William Penn High School, Philadelphia. 494 pages. Price, \$1.20

"Dr. Bertha Clark has attempted, successfully, to build up a body of scientific material for freshmen in high school, drawn from the problems of a scientific nature which confront the pupils in their home life and outdoor life. The book is, therefore, not 'pure science' but 'humanized science'; and the author attempts to organize these problems and their solutions so as to leave the pupils with a scientific point of view of their problems and their solution. Hence we have an introduction to science of a kind likely to be of great value to the pupil."

AMERICAN BOOK COMPANY
New York Cincinnati Chicago

Just Published A Laboratory Manual of Agricultural Chemistry

94 pages, Illustrated.

60 cents

HEDGES and BRYANT

This volume, the outgrowth of several years' experience in teaching chemistry in its relations to agriculture in agricultural institutions, is designed as a laboratory guide for students in such courses. It is assumed that this course shall be preceded by one in general or inorganic chemistry and accompanied by one in the theory of Agricultural Chemistry. A few experiments in quantitative analysis have been given at the beginning to illustrate fundamental principles. The arrangement of the course gives the teacher opportunity to present the theory in any particular manner he may desire. The directions encourage the student to do independent work and think for himself.

The Ellen Richards Research Prize

The Naples Table Association for Promoting Laboratory Research by Women announces the offer of a research prize of \$1000.00 for the best thesis written by a woman embodying new observations and new conclusions based on independent laboratory research in Biology (including Psychology), Chemistry or Physics. Theses offered in competition must be in the hands of Chairman of the Committee on the Prize before February 25, 1917. Application blanks may be obtained from the secretary, Mrs. Ada Wing Mead, 283 Wayland Avenue, Providence. R I.
